Madison, AL

County and State

SUPPLEMENTARY LISTING RECORD

NRIS Reference Number: 10000172

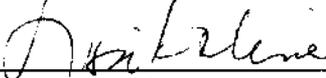

Date Listed: 4/16/2010

Property Name: Merrimack Mill Historic District

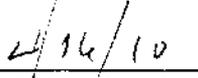

County: Madison

State: AL

This property is listed in the National Register of Historic Places in accordance with the attached nomination documentation, subject to the following exceptions, exclusions, or amendments, notwithstanding the National Park Service certification included in the nomination documentation.

Signature of Keeper

Date of Action

Amended Items in Nomination

This SLR is issued to clarify the use of vernacular architecture typology and to correct a bibliographic reference.

Sections 7 and 8 of this nomination, uses "Types A, B, J, L, and M" as architectural terminology developed by Christopher ver Planck. These alphabetical terms or labels should not be considered definitive.

This nomination does provide good descriptions for the vernacular buildings found within the district—based on form and floor plan and does use typology that has been recognized and codified through architectural scholarship (typology such as, shotgun, dogtrot, double pen, etc.).

In Section 9, page 46, the following reference now reads:

ver Planck, Christopher. "Typology of Southern Mill Village Dwellings," a Sally Kress Tompkins Fellow student intern project. 1998. This work is not accessioned into the HABS/HAER, National Park Service, U. S. Department of Interior official collection.

Notification:

The Alabama State Historic Preservation Office was notified of this amendment.

Distribution:

3. State/Federal Agency Certification

As the designated authority under the National Historic Preservation Act of 1986, as amended, I hereby certify that this nomination request for determination of eligibility meets the documentation standards for registering properties in the National Register of Historic Places and meets the procedural and professional requirements set forth in 36 CFR Part 60. In my opinion, the property meets does not meet the National Register Criteria. I recommend that this property be considered significant nationally statewide locally. (See continuation sheet for additional comments.)

8. Statement of Significance

Applicable National Register Criteria (Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing)

- A Property is associated with events that have made a significant contribution to the broad patterns of our history.
- B Property is associated with the lives of persons significant in our past.
- C Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- D Property has yielded, or is likely to yield information important in prehistory or history.

Criteria Considerations (Mark "X" in all the boxes that apply.)

- A owned by a religious institution or used for religious purposes.
- B removed from its original location.
- C a birthplace or a grave.
- D a cemetery.
- E a reconstructed building, object, or structure.
- F a commemorative property.
- G less than 50 years of age or achieved significance within the past 50 years.

Areas of Significance (Enter categories from instructions)

2. Location, Continued

The Merrimack Mill Village Historic District is generally bounded by Dunn Dr., Triana Blvd., Cobb Rd., Drake Ave., Grote St., Spruce Ave., Holiday Dr., Elm Ave., and Clopton St. in Huntsville, Madison County, Alabama.

The district contains the following street numbers:

Alpine St.	3200 - 3707
Bradley St.	3200 - 3707
Broad Pl. N	3300 - 3420
Broad Pl. S	3503 - 3516
Cedar Ave.	3300
Clopton St.	3201 - 3707
Drake Ave.	3100 - 3310
Dubose St.	3500 - 3707
Elm St.	3501
Emm Ell St.	3500 - 3707
Fairview St.	3500 - 3706
Grote St.	3501 - 3707
Ivy St.	3104 - 3208
Linden Ave.	3101 - 3115
Triana Blvd.	3008 - 3704

county and State Madison County, AL

7. Narrative Description

Narrative Description

The Merrimack Mill Village Historic District contains 278 resources of which 249 or 90% are contributing and 29 or 10% are non-contributing. The irregular-shaped district is generally flat and has a grid of streets that form a pattern of rectangular blocks except at its center, where a Y-shaped street interrupts the grid. Triana Boulevard, a major local arterial, forms much of the eastern boundary of the district with small groupings of houses extending to its east at the district's northern and southern ends. Drake Avenue, also a major arterial, serves as the district's southern boundary. The western boundary extends northward along Grote Street between Drake Avenue and Spruce Street, the rear lot lines of properties along Clopton Street between Spruce Street and Elm Avenue, and the rear lot lines of properties along Triana Avenue between Elm Avenue and Dun Drive. The northern boundary extends eastward along Spruce Street between Grote Street and the rear lot lines of properties along Clopton Street, then along Elm Street to the rear lot lines of properties along Triana Avenue, and then along Dunn Drive to Triana Boulevard.

The layout of the village is essentially identical to the configuration shown on a circa 1937 Huntsville city map, by which time virtually all of the historical resources had been constructed. The plan of the district is virtually a copy of Kirk Boott's 1820 design of the Merrimack Mill Village in Massachusetts complete with a Y near the center of the district. In the Huntsville mill village, this Y is formed by the convergence of South Broad Place and North Broad Place as they pass through Alpine Street and extend eastward to Triana Boulevard. Some of the District's largest houses, including the superintendent's residence (Inv. # 85), are located in the Y.

Outside the Y, the largest and most stylized houses are located on Triana Boulevard and include the district's Colonial Revival style manager's house (Inv. # 250), all of the district's American Foursquare houses (Inv. #s 244, 246, & 248), and all but one of the district's Type M houses (Inv. #s 239, 241-243, 245, 247, and 249). In addition, the district's only commercial buildings (Inv. #s 259, 276, and 277) and two churches (Inv. # 253 and #255) are located on Triana Boulevard. Except for the three commercial buildings and the two churches, the remainder of the district is residential.

The Merrimack Mill Village Historic District contains a very wide range of mill house types as identified by Christopher ver Planck in his study of Southern mill village types. Especially significant are the ninety-six examples of Type L two-story duplexes that, according to ver Planck, are quite rare in the South and represent perhaps the most intact such concentration in Southern mill villages. Of these, moreover, all but three are contributing, although many were altered in the 1960s and 1970s by the application of aluminum or vinyl siding, the installation of aluminum windows, and/or porch enclosures. No house that has had a porch removed is considered contributing.

In addition to the Type L houses, all but a few of which were built in the earliest phases of village development between circa 1900 and 1910, the most representative mill types are the fifty-six Type A houses. In Merrimack, the Type A houses diverge from ver Planck's definition in that they are duplexes instead of single family shotgun houses. The district contains thirteen 1920s Type B duplexes, with another thirteen Type B houses modified without the rear shed. These are concentrated along Drake Street, Linden Avenue, and Triana Boulevard. There are also three very distinctive circa 1920s Type J houses; fifteen circa 1920s I-style

CONTINUATION SHEET

Section 7 Page 3 name of property: Merrimack Mill Village Historic District
county and State Madison County, AL

duplexes, all of which are on Bradley Street, Broad Place, and Clopton Street; eight circa 1925 Type M houses, all of which are along Triana Boulevard except for one on Broad; three American Foursquare houses on Triana Boulevard (Inv. #s 244, 245, and 248); and one very stylized Colonial Revival style manager's house on Triana Boulevard (Inv. # 250).

In addition to the Type B houses, the latest houses built in the district were the circa 1925 vernacular duplexes on Grote, Fairview, and Emm Ell Streets, and the bungalow-style duplexes on Dubose and Emm Ell Streets (which are not identified by ver Planck as standard types). All of them are located in the northern portion of the district west of Clopton Street. The company also built a concrete building with a flat roof in the rear yards of the houses, which served as a combination privy and coal shed, and some properties had concrete garages for use by the community. Moreover, many of the houses in this last development stage have two-foot high concrete block walls along the rear of the property at the alleyway.

With the exception of the two-story commercial store (Inv. # 259), the two churches (Inv. # 253 and #255), and several small houses, all of the buildings in the district were built before circa 1945. Most houses were constructed of wood and had double hung wood windows and chimneys. Houses built in the last stage are either concrete block or wood with double hung wood windows and chimneys. During the late 1940s when the company sold its houses to residents, asphalt shingles often replaced wood siding, wrought iron replaced many wood porch posts and columns, and some converted to single family. During the 1960s and 1970s, many owners refaced their houses with vinyl or aluminum siding, installed aluminum windows and may have converted their buildings to single family houses.

The district has a moderately dense tree canopy and remains very intact and distinctive, with only a very few houses built after 1959. Most of the modern houses are Ranch style. In addition, the village remains well kept with groomed yards and no structures that are seriously deteriorated.

The inventory refers to the house types described in the "Typology of Southern Mill Village Dwellings" that was developed by Christopher ver Planck for the Historic American Engineering Record, Southern Textile Industry Survey. The following descriptions for the types found in the Merrimack Mill Village have been adapted from the ver Planck study.

Type A – One story shotgun with a) two or three rooms along one axis, b) a rectangular floor plan, and c) a front facing gable or hip roof. The façade has a single entry which is flanked by a 6/6 window to one side. The entire façade is sheltered by a hip or shed-roof porch and there is a rear full porch. Although ver Planck defines these houses as single family, in Merrimack, they were constructed as duplexes with the units back-to-back instead of side-by-side as in typical double shotguns.

Type B – One story duplex with a rectangular floor plan and a side gable roof. The façade is characterized by two centrally located adjacent doors which are flanked on the outside by 6/6 windows. The chimney is usually in the center of the house and it has a brick pier foundation and a shed-roof porch. In addition, some mostly constructed circa 1935-1940s were built without the rear shed.

Type J – Type J is a two-story single family dwelling or duplex, known generally as an I- House. This house, however, features a rear addition and a triangular dormer on the roof. The first floor has one door (or two if a

United States Department of the Interior
National Park Service

NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET

Section 7 Page 4 name of property: Merrimack Mill Village Historic District
county and State Madison County, AL

duplex) centrally located flanked by 6/6 windows, and it is usually sheltered by a shed-roof porch. In Merrimack, some Type J houses were constructed without second floor front windows, while others were constructed with them.

There are several houses in Merrimack that are identified only as I-Houses because they do not contain the defining dormer.

Type L – Type L is a two story, double pile, four bay cross-gable duplex. The first floor has two centrally located 6/6 windows each flanked on the outside by an entrance. Each entrance is sheltered by a partially recessed shallow-pitch roof porch which straddles the corner posts of the façade and extends back toward the rear of the house. The upper façade has two centrally-located pairs of 6/6 windows which are sheltered by the eaves of the cross gable.

Type M – Type M is a one story duplex with a shallow pitch hip roof. The four-bay façade consists of two centrally-located entrances flanked by 6/6 windows. The façade is sheltered by a shed-roofed porch and there are usually two chimneys, one for wood and one for coal.

A number of outbuildings are described in the inventory. They are typically simple, utilitarian structures and are not included in the inventory count but are merely described in connection with the larger buildings they are associated with.

Archaeological Component

An archaeological assessment of the study area was not completed as part of this project. However, given the nature of the area's history, potential subsurface remains could provide additional information about the historical development of the district.

NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET

Section 8 Page 33 name of property: Merrimack Mill Village Historic District
county and State Madison County, AL

The Merrimack Mill Village Historic District is significant under criteria A and C as a planned textile mill village in Huntsville, Alabama. While the mill buildings were razed in 1992, the mill village remains highly intact. Its layout is virtually identical to Kirk Boott's design of the circa 1820s mill village in Massachusetts known as Merrimack where the flat grid is broken only by a Y in the center of the village, and the mills were located outside its boundaries. Begun in 1900 and built through the early 1950s, Huntsville's Merrimack mill village was also based on the ideas of D. A. Tomkins including his recommendation that mill villages contain a diversity of styles, worker houses be set apart from managers' houses, and that all amenities lie within walking distance to workers' homes. As such, Merrimack village contains a diverse collection of textile mill village architecture that is representative of the common southern mill village building types as identified in Christopher ver Planck's study of textile mill architecture for the Historic American Engineering Record. Included are nine worker housing types and styles, including the distinct Type L duplex seen almost exclusively in New England, as described in ver Planck's "Typology of Southern Mill Village Dwellings." The period of significance for the district is between circa 1900 to circa 1955, when its earliest and latest contributing resources were built.

The Merrimack Mill Village retains a diverse collection of textile mill village architecture. Constructed circa 1900 to 1955, the buildings are representative of the common southern mill village building types as identified in Christopher ver Planck's study of textile mill architecture for the Historic American Buildings Survey

HISTORICAL NARRATIVE

Following the Civil War, the South struggled to transition its economy, in part, from agricultural to industrial. Between 1880 and 1890, in fact, all the southeastern states experienced a boom in the development of their textile industries when the number of textile mills increased from 161 to 239 and the number of spindles and looms in operation rose from 553,940 to almost 1.6 million.ⁱ Safford Berney's Handbook of Alabama of 1892 records twenty-five cotton textile mills in Alabama for that year, four of which were located in Madison County, the largest number of mills in any one county in the state during that year.ⁱⁱ

In addition to the area's rich cropland and abundance of labor, Huntsville attracted a number of enterprising and ambitious entrepreneurs. Among them was Tracy Pratt. In 1898, Pratt, also an indefatigable promoter of Huntsville, determined that the Merrimack Manufacturing Company of Lowell, Massachusetts, built in the 1820s, should build a new plant in Huntsville.ⁱⁱⁱ He knew that the company's executives wanted to construct a southern mill to produce grey goods, or unbleached cotton, which could be shipped north for dyeing and printing. Pratt persuaded these men to visit a site in Huntsville that he believed would be ideal. On the day they arrived, however, an untimely flood ripped through the area, nearly squelching the deal. Pratt got the Northerners to return for a second visit, however, which occurred on a sunny spring day, and convinced them to locate in Huntsville.^{iv}

In 1899, the State of Alabama granted the company a charter, under legislative act No. H-772, to construct factories and undertake business in the state that included an exemption for "its mills and factories so erected from taxation for ten years." The charter was approved by Alabama Governor Joseph H. Johnson on February 17, and on February 22, 1899, The Huntsville Weekly Democrat announced:

A New Factory!

Section 8 Page 34 name of property: Merrimack Mill Village Historic District
county and State Madison County, AL

Huntsville in the Swim
Two Million and a Half Dollars!

For sometime past it has been rumored that Huntsville would have another cotton mill, and it has at last materialized. There will soon be erected by the Merrimack Manufacturing Company of Lowell, Massachusetts, on the Fennell place, with 200,000 spindles, and with 5,000 operatives, an immense cotton factory. The charter has been granted and the ground will be broken in a few weeks. The governor's veto of the bill exempting factories from taxation for ten years, will not affect the contract. The plant will manufacture various kinds of cotton goods, calico, gingham, sateen, velveteen, nice dress goods, domestics, etc. It is thought that the additional industry will increase our population almost double.^v

In typical overblown prose of the day, the newspaper announcement botched a few facts. For example, 5,000 "operatives" were not needed for the new mill; nor was it located at the "Fennell place." Rather, the Merrimack Manufacturing Company had purchased 1,385 acres near Brahan Spring outside the city limits of Huntsville, and ground was broken for the Merrimack Mill on July 4, 1899.^{vi} In addition, the charter signed by Alabama governor Joseph H. Johnson on February 17, 1899, apparently did contain language including a ten-year tax exemption for Merrimack, which the newspaper account states he had vetoed. The charter, listed in the Public Acts of the General Assembly of Alabama, 1888-1889, consisted of eleven sections, and read in part:

To authorize and empower the Merrimack Manufacturing Company, a Corporation of Massachusetts, to own, build, construct, purchase and operate cotton mills and other manufactories in Madison County in this State, to confer upon it other powers enumerated in this Act, and to exempt its mills and factories so erected from taxation for ten years.^{vii}

According to an article in The Huntsville Parker: "On May 8, 1899, the Merrimack Company petitioned the court for permission to erect a railroad track spur from the lines of the N. C. and St. L. Railroad in West Huntsville to the site of the proposed site."^{viii} The petition was granted, and transportation of grey goods to northern plants for printing and dyeing was assured. This action was followed by construction of a streetcar line in 1900 that tied Merrimack to Huntsville making it one of the City's earliest suburbs.^{ix}

In 1899, Merrimack's Huntsville facility began with construction of its mill for which it hired the country's premier textile mill designers, Lockwood Greene of Boston. The firm was formed in 1871 by Amos Lockwood, who was already a successful business entrepreneur, to serve as a consultant to textile mills. As cotton mills proliferated in the post-War South, Lockwood Greene established a reputation as the exemplar for mill design and construction. By 1896, it had designed four of the six largest mills in the state of South Carolina, and by 1901, had built nine in Georgia. In addition, the firm was responsible for the design and construction of the A. French Building for Textile Engineering at the Georgia School of Technology (now the Georgia Institute of Technology) in Atlanta in 1889, then a state-of-the-art building said to "embody the very latest ideas of mill construction."^x

On July 9, 1900, Merrimack's first mill was completed and remained extant until 1992 when it was torn down. The three-story building contained carding and drawing facilities in the central portion of the 1st floor with the pickers' area to the right and a repair shop and a machine shop to the left; weaving on the 2nd floor; and spooling, warping, and spinning on the 3rd.^{xi} Most of the first mill's equipment was previously used, having been shipped South from Massachusetts. Power to operate the mill machinery was provided by steam that

county and State Madison County, AL

required constant stoking with coal. Boiler crews of four men to shovel the coal, four to bring the coal from the coal pile to the boiler, and extra workers to stand by in case they were needed were to keep the steam engines operating on a steady basis.^{xii}

On August 11, 1900, The Huntsville Republican reported the plant's start-up:

The first cloth has been made at the Merrimack Mills and was woven by Will Esslinger. Looms will be started as fast as ways are ready and large quantities of cloth will be turned out daily.^{xiii}

Handsomely capitalized with \$25,000,000 entirely from outside investors, Merrimack began its vast operation with 25,000 spindles, an estimated 1,800 looms, and an initial labor force of 500-750 all under the supervision of A. W. Hunking.^{xiv} Workers in the mill included white men who did the heaviest and best paid work and served as engine and pump room operators, card fixers, and spindle plumbers; white women who worked as spinners, loom operators, rope layers in the spinning room, and weavers; black men who did menial jobs such as sweeping and cleaning up and unloading cotton bales, and who were not permitted to live in the village; and white children as young as seven whose alternative, at least according to one observer, was a life of "sloth and degradation."^{xv} Merrimack children were employed as doffers and sweepers,—and, according to a company-written history, they, as well as adults, operated the looms "often standing on a box in order to reach the spindles."^{xvi}

Wages were at first paid in gold coin, said to be at the time, three or four dollars for a full week's work, usually lasting some 50 to 55 hours per week. Workers presented a metal disc to the company paymaster inscribed with their identification number in order to receive their pay.^{xvii}

Completion of the mill and anticipation of even more textile mills in Huntsville prompted The Huntsville Republican to report in 1901 that Huntsville would soon be "second only to one city in the United States [in its number of spindles] and that is Lowell, Massachusetts."^{xviii} The first mill in Lowell was built in 1814 and furnished housing to its employees. These workers were generally young women hired from nearby farms who then lived in company boarding houses or tenement buildings rather than single or double family homes. Outlying land near the mill was sold to commercial developers to build stores outside the purview of the mill owners. Like most New England mill villages, Lowell was not a "company town" with the mill providing its workers with the goods and services they needed.^{xix}

Southern mill developers, including Tracy Pratt, often took a radically different approach. According to ver Planck, they believed that in order to lure poor Southerners off the land and into a factory environment, they would have to provide not only housing, but also a plethora of amenities. In that way, the company could also improve workers by intervening in every major aspect of their lives. In their view, corporate paternalism developed a controlled worker, a controlled worker was a disciplined worker and a disciplined worker was a happy worker.^{xx}

In anticipation of Huntsville's new plant, The Huntsville Republican reported on January 6, 1900:

As the Merrimack Mill nears completion, the attention of the public is attracted to West Huntsville . . . Last week we made notice of the fact that a gentleman had begun the erection of

United States Department of the Interior
National Park Service

Section 8 Page 36 name of property: Merrimack Mill Village Historic District
county and State Madison County, AL

a building to locate a steam bakery. There is also good prospects [sic] of locating a bank, meat market, grocery, and a general store. All of this shows that our recent prediction that West Huntsville was going to be one of the best suburbs to our city is getting more prominent every day. We would advise investors to keep in touch with West Huntsville.^{xxi}

Control – or contentment – of workers, according to the paternalistic ideal, also depended significantly on the design of the company village and many southern mill villages initially followed the design of their Northern counterparts. Both followed a hierarchy of housing, with homes for managers and other higher echelon employees built in a separate area from those workers, usually housed in duplexes, who operated the spindles and looms. Black workers took the most menial and worst paid jobs and lived in a separate "colored row" outside the mill village. All homes and amenities, however, were to be within walking distance of the factory.^{xxii}

Merrimack's Huntsville plant, according to Christopher ver Planck, adhered to the ideas outlined in Daniel A. Tompkin's 1899 handbook, Cotton Mill, Commercial Features. The author advised building villages outside the city limits – as Merrimack did – thereby avoiding not only city property taxes but also eliminating municipal jurisdiction over mill affairs. He also advocated variety in construction with half a dozen different plans for village houses, including "shotgun" houses, four-room, gable-end homes, and L plan layouts. Tompkins's plans provided for individual exterior embellishments as well as different paint colors for the homes.^{xxiii}

In addition to Tompkin's ideas, Merrimack's Huntsville project relied precisely on Kirk Boott's 1820s design in Massachusetts. Boott had been the principal developer, town planner, and architect for the Merrimack Company's original village. Years later, when the company planned its new facility in Huntsville, his design was essentially replicated including its distinct "Y" layout and New England style houses, particularly the Type L two story mill village duplexes which are numerous in Merrimack and virtually found nowhere else in the South.^{xxiv}

In Massachusetts, Boott planned a mill and its surrounding village that were bordered by privately owned (not mill owned) commercial enterprises. In Huntsville, though, outlying land was offered to village residents for use as community vegetable gardens or as pasture for their own cows or pigs. According to The Huntsville Parker: "Owners stabled their stock on their lot at night and drove them back and forth to the pasture each morning and evening. Wagons delivering baled hay and straw passed regularly through the village alleys. Pens for hogs were provided a little distance from the village, but when the wind blew from that direction, they seemed closer."^{xxv} The company also landscaped the common areas, employing its own gardeners and groundskeepers.^{xxvi}

On August 11, 1900, The Huntsville Republican reported that, "A large force of hands are at work grading the new streets for the Merrimack Village, and the place now puts on a city-like appearance."^{xxvii} The village's streets were said to have a "very respectable setback, and the streets...wide and straight." They were not paved, but were leveled and graded, and said to be "no worse than most streets in Huntsville at that time."^{xxviii}

Oil lamps provided lighting for the streets as well as the interiors of the houses. Water for the houses was furnished through pipes leading from nearby Brahan Spring into pumps at the rear of each lot. The streets, laid out according to D. A. Tompkin's design, followed an alphabetical name pattern.^{xxix} Identical to its Massachusetts village, its flat symmetrical grid was broken only with one Y shaped street in the center of the

United States Department of the Interior
National Park Service

Section 8 Page 37 name of property: Merrimack Mill Village Historic District
county and State Madison County, AL

village that led to the entrance of the mill.^{xxx} There, the village's resident agent house was originally built and replaced for \$8,000 after burning in 1917 (Inv. #250).^{xxxi}

Within several months of completion of the street work, the village's first houses were being finished and occupied. Constructed by E. L. Patterson, they were located along two blocks immediately facing the mill and on streets (named "A," "B," and "C") directly west of these blocks as far back as the east side of C Street (now Clopton Avenue).^{xxxii} The bulk of these were Type L New-England style mill village houses. On October 20, 1900, the Huntsville Republican noted:

E. L. Patterson has now under construction six new houses for the Merrimack Manufacturing Company. Five of the frames have been completed and the additional houses will be under frame this week. Mr. Patterson has the contract for building ten more new houses...They now have sixty two-story and six one-story houses completed which are nearly all occupied by tenants.^{xxxiii}

Homes at Merrimack were more spacious than many other village homes and, according to company records, strongly built with rooms large enough to accommodate the large furniture in vogue during this period. Furthermore, the houses were all planned to be either duplexes or apartments with large porches.^{xxxiv}

At the same time, construction began on the village's first commercial venture, a dry goods store that was completed almost simultaneously with the mill. Leased to W. L. Halsey, the store also employed a store manager. One employee traveled around the village daily taking orders and another would make the deliveries of ordered goods by horse and wagon. The second floor of the company store was used for meetings of the Boy Scout, Girl Scout, and Sea Scout troops, and for adult fellowship including lodge and church activities, such as meetings of the Odd Fellows, Junior Order of United American Mechanics, Woodmen of the World, and the Red Men Lodge. When construction of the second mill was begun, the store site was needed for this additional mill. Consequently, the store was moved by local house mover, Homer Middleton, who attached ropes to the store and pulled it with horses, rolling it over logs to its present location within the village (Inv. # 259).^{xxxv}

Subsequent additions to the general store building or adjacent to it accommodated a bicycle shop, photographic studio, kindergarten, library and two grocery stores as well as a produce store and meat market, drugstore, barber shops, a beauty shop, and a restaurant. Although the building remains, none of these businesses have survived. In addition, the company sponsored cooking, canning, and sewing demonstrations and offered classes in nutrition to its village residents and workers.^{xxxvi} It also sponsored semi-professional baseball teams whose players went on to play on college teams or in minor or major league teams.^{xxxvii}

In 1903, construction of Merrimack's second mill began and was completed early the next year. It also operated with some used equipment from the Northern factories and employed a new automatic Model J loom. Power was derived from a Corliss steam engine.^{xxxviii} Three years earlier, on August 25, 1900, The Huntsville Republican had reported that the second mill "...will be the same size as the one now in operation. The same smokestack and engine will be used to operate the two mills." In fact, the second mill was larger than the first with five floors, while both did use the same smokestack.^{xxxix} The Huntsville Mercury of February 25, 1903, called it "A Monster Mill" which would have 65,000 spindles and 2,000 looms. The newspaper also reported

United States Department of the Interior
National Park Service

NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET

Section 8 Page 38 name of property: Merrimack Mill Village Historic District
county and State Madison County, AL

that an "extra force" of skilled workers would be employed at the mill and the mill would be "one of the largest cotton mills in America."^{xi}

When the second mill was completed, it operated 90,000 spindles and 2,900 looms, and 200 men were recruited to build it. It was 438 by 130 feet with a new floor added every three weeks during construction, and it contained a new engine house and pump house. Brick for the second mill was manufactured in or near Nashville, Tennessee and the wood for its floors and rafters came from South Georgia and South Alabama. Floors were built over pendles to minimize vibrations from the looms.^{xi} With the help of dynamite, a gravity plume was dug to deliver water to this second mill from nearby Brahan Spring. The digging was completed by hand, requiring an additional labor force, and went down as far as thirty-five feet in some areas. When finally completed, five pumps were installed, and inside the flume a four-foot diameter water main provided pumped water to the mill.^{xiii}

With completion of the second huge mill that was also razed in 1992, the company resumed development of major amenities for its workers. Joseph J. Bradley, who became resident agent in 1905, was instrumental in the formation of many of these, particularly the village school and hospital. Thirty-seven years old when he came to Huntsville as Merrimack's agent, he was relatively inexperienced in the textile business. Nonetheless, according to a company history, he established himself as a leader very much interested in the wellbeing of the mill's workers and residents and became well loved and respected.^{xiii}

By 1908, Merrimack along with Alabama's other textile mills became embroiled in the battle over reform of Alabama's notorious child labor practices. That year, the Alabama Legislature passed Act No. 776, making it illegal for anyone under the age of twelve to be employed in any mill in Alabama. A financial panic that same year brought with it a scarcity of money in circulation and the closing of many banks. According to *The Huntsville Parker*: "Local residents suffered, but not as much as they would have without the operation of the mill."^{xiv}

In spite of these persistent labor issues, Merrimack village grew tremendously throughout the 1910s and 1920s, providing employment and many benefits to the mill workers. In 1913-1914, the company built a large new warehouse which cost approximately \$15,000 and measured 50 x 150 feet, but it is no longer extant. J. J. Bradley oversaw the project using mill workers to construct it.^{xv} According to 1913 Sanborn Maps, the mill complex now included two huge mills, a separate warehouse, a separate cloth room, and also utilized a million-gallon reservoir nearby. Within a year and a half, the company added 300 looms bringing its loom cache to 2,681, operated 92,480 spindles, and employed just over 1,000 workers.^{xvi}

Having completed necessary production facilities, the company moved to provide additional services. In addition to the many houses built during the 1910s, including the agent's Colonial Revival style house (Inv. #250), all of the district's I houses, and some Type L duplexes, the village began to build a school, a hospital, and churches. Such amenities were considered "good business" and the success of the mill was tightly bound to the success of its services. In 1916, Tracy Pratt observed:

The mill villages of this industrial community have done as much if not more than any other similar communities in any part of the world in uplift work, and we can point with merited pride to the modern schools of the mill villages where each boy and girl is compelled by law to go. The

school buildings are also provided by the mills, who also furnish part of the teachers. The villages also support the kindergarten, domestic science schools, reading rooms...baseball teams (4 teams composing a City League) of high-class players...and the trained nurses provided by each mill who are subject to the call of anyone needing help in the villages.^{xlvii}

In December 1913, Merrimack opened its first school, known as the Doutheboys Hall School, which operated from 6:00 a.m. until noon for eight weeks a year. In 1914, a four-room school was constructed by the company, and in June 1919, a larger brick school building known as the Joseph Bradley School was built. Costing some \$22,000, the two-story building had ten rooms and an auditorium that could accommodate 700 people.^{xlviii} None of the school buildings remain.

At the same time, agent Bradley also organized Merrimack's first hospital located in a "small cottage" at 337 South Broad Place, with one resident doctor and two nurses. Malaria, a common ailment in the South during the summer months, was a serious threat to Merrimack workers. Some years before, in February 1901, there had been an outbreak of smallpox which forced Merrimack to quarantine the village. Persistent dread of these two ailments prompted Merrimack to provide its own hospital facilities.^{xlix}

By 1916, a full-scale hospital building was completed and was, incidentally, made available to the residents of Huntsville when Huntsville Hospital experienced a critical overcrowding. Though concerned about the greater Huntsville area, Pratt said of the company hospital, "The nurses look after the sanitary conditions in and about each house in the village, report the appearance of any contagious disease, and see [sic] that quarantine is established when needed, thus insuring healthy condition."^l The purpose was to ensure the health of residents in the village through preventive care. The hospital's facilities included a first-aid room, recreation room, two hospital rooms, and operating room, and doctor's office, financed by the company. Later, a dental clinic was added. None of the hospital facilities remain.

As early as 1900, Merrimack provided for churches – usually with donations of land – for its workers. According to the philosophy of corporate paternalism, churches were considered necessary to keep moral standards high and discourage slothfulness and other "sinful" activities. Pentecostal churches many believed, however, might create "emotional outbursts" and were frowned upon.^{li} In May 1900 *The Weekly Tribune* reported that Bryson Memorial Chapel was to be built at Merrimack on Spring Street (now Ivy) east of Triana Boulevard with "about \$1,000.00 [having been] raised by subscription."^{lii}

In June, *The Republican* reported that Mrs. Cyrus McCormick, the famous Huntsville resident and widow of inventor Cyrus McCormick, announced that a missionary would be located at the church. A "Miss House", who "has been in the field several years and lately has been in the Blue Ridge Mountains," would serve as missionary to the Merrimack employees. The chapel was completed by August when Miss House arrived, established a kindergarten on the premises and provided other educational and mission services for the Merrimack community. In 1903, the church was sold to the Baptist denomination and Bryson Memorial Chapel built a second church at Merrimack. The Baptist church conducted services there until it burned in 1951. The congregation met for a time at the Joe Bradley School until they completed construction of a new church in 1952 (Inv. #253).^{liii}

county and State Madison County, AL

In 1901, St. Paul Methodist Church was established in Merrimack at the end of Oak Avenue east of Triana Boulevard. That same year, Huntsville Park Church of Christ began conducting services, but not until 1913 would the Church of Christ have its own building on Triana Boulevard just north of the general store (Inv. #259). In 1953, the church built another structure at the corner of Pike (Triana) Boulevard and Ivy Street on land donated to it by the Huntsville Manufacturing Company.

During the 1920s, Huntsville Church of God began meeting with its Merrimack members at the grocery store in the village. The "grocery store" ministry lasted until 1936 when church members constructed their own brick building on Triana Boulevard and Drake Avenue on land leased to them by the Merrimack Company.

By the late 1910s, the flush years of World War I created seemingly boundless optimism for Southern industry when textile manufacturing was at its high point. In 1916, The Huntsville Mercury Centennial reported that "the city mill villages had done as much if not more than any other similar communities in any part of the world to uplift work" and "that any man or woman, boy or girl (of proper age) can find employment at good wages in buildings that are kept in a perfect sanitary condition, heated and electrically lighted and a character of work that is interesting and not laborious; where there is plenty of room at the top for those who are energetic industrious and ambitious."^{iv}

Just after the War, in February 1920, Merrimack commissioned Lockwood Greene & Company engineers to construct a three story, 30,000 square foot extension with a basement to its No. 1 mill.^{iv} In September, the \$100,000 addition was completed. During the same year, Merrimack also converted its operations from steam to electricity, adding electric motors to operate the machines. Concrete sidewalks, gutters, and curbs were built in the village, and all new houses were built and wired for electricity. By 1922, in fact, all of Merrimack's existing houses had been switched from oil to electricity, and water was being piped in from nearby hydrants.^{vi}

In 1922, Merrimack built a \$50,000 sewer system in the mill village, and in March 1923, it announced plans to hire contractor, William P. Dilworth, to build 80 additional operatives houses, these mostly Type E and M houses.^{vii} Only a week later, Dilworth was to begin construction of some 40 "double tenement" houses likely Type B duplexes, and during the same period, all of the village's Type J, Type M, and American Foursquare houses were constructed.^{viii} In 1920, a large addition was made to the grocery store on Triana Boulevard (Inv. #259).^{ix} In 1927, the company purchased an additional 240 acres where it would build more housing units.^x

But, by then, Merrimack's corporate seams were beginning to loosen. By 1919, as war ended and foreign manufacturers rejoined the ranks of textile manufacturers, competition led many American mills into bankruptcy. Even though mill wages had remained low during the war, averaging around only \$20 to \$25 per week, many mills cut these wages even more while maintaining increased working hours in an effort to stay afloat against the onrushing tide of competition. Such actions alarmed and angered workers and led to increased interest in labor unions as well as a number of strikes by union members unwilling to accept the pay cuts.

In 1921 the textile industry underwent a depression, which hurt not only the labor unions but ended a period of steady growth which had prevailed since the late nineteenth century.^{xi} Four years later, Merrimack had 1,400 employees — its highest ever — but, that same year, it reported its first strike.^{xii} By 1927, its employee roster plummeted to 850, its lowest number since the early 1900s.^{xiii} Two years later, America's stock market had

United States Department of the Interior
National Park Service

NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET

Section 8 Page 41 name of property: Merrimack Mill Village Historic District
county and State Madison County, AL

crashed, and by then, of 1,281 mills operating in the South, only 200 reported a positive cash flow to the federal government.^{lxv}

As part of a move to stall this stunning downward slide, Merrimack began offering its mill houses for sale. Valued between \$900 and \$7,000, former employees were usually given the right of first refusal for the purchase of the houses formerly furnished to them by the mill. In other cases, houses would be offered to anyone, mill employee or otherwise, who could come up with the purchase price or a down payment. Mill housing was also sold to investors who could, in turn, rent out the properties to mill workers as well as non-mill laborers. Since lot lines had never been clearly delineated by the mill owners, at the time of these sales they were generally established at the halfway point between two houses, with extra land or odd lots made available for sale for new homes.^{lxv}

By 1937 most of Merrimack's houses had been constructed, the most recent ones being primarily Type A shotgun duplexes built west of what is now Clopton Street on Dubose, Emm Ell, Fairview, and Grote Streets, as well as east of Triana Boulevard between Linden and Drake Avenues.^{lxvi} During the next ten years, moreover, many bungalow-type duplexes were built in the same area. By then, the company had begun to provide a concrete privy and bathroom for all of its new houses and, in addition, constructed them in the back yards of most of its earlier houses. Some properties also had concrete garages that were rented to residents on a first come-first serve basis. Many of these buildings remain intact.

A growing litany of complaints by Southern mill workers led to an astonishing increase in the United Textile Union's membership. From 40,000 in 1933, its rolls jumped to 270,000 in 1934.^{lxvii} Helped by union organizer John Dean and Huntsville native Mollie Dowd, the union declared a strike on July 17, 1934, demanding higher wages and other reforms. That day, nearly two-thirds of Alabama's 30,000 textile mill workers walked out, including the 4,000 employed by Huntsville's Merrimack, Dallas, Lincoln, and West Huntsville mills. One day later, The Huntsville Times reported that the city's food supply had been cut off, and on July 19, it said there were pickets on duty "during [the day and night]."^{lxviii}

Hard hit, Huntsville was said to have taken on the appearance of an "armed camp," with police standing at the ready for the frequent confrontations with striking mill workers. Union organizers toured the area, driving trucks and cars, calling out to the "lint-heads" to "walk off their jobs." There were shootings, riots, and Alabama's governor was forced to mobilize the state's militia in an effort to quell the uprisings of disgruntled workers. At one point, Dean was kidnapped and driven from his Huntsville room at gunpoint.^{lxix}

In 1937, one thousand Merrimack workers declared another strike, following the workers at nearby Dallas Mill. With the advent of World War II, however, the South's textile industry enjoyed a brief resurgence. Once again, mills worked around the clock to provide textiles for military uniforms, shirts, and other fabric requirements. This rebirth of the industry was not limited to the South, however, or even to the continental United States. After the war's end and under the Marshall Plan, foreign mills entered the now international competition for jobs in the textile industry. In Europe, as was true in the South after the Civil War, wages were lower than in the United States with workers hungry and clamoring for any available jobs.

The Merrimack Manufacturing Company continued its Huntsville operations during World War II supplying textiles for military uniforms in addition to domestic goods. In 1946, the mill was sold to M. Lowenstein & Sons

United States Department of the Interior
National Park Service

NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET

Section 8 Page 42 name of property: Merrimack Mill Village Historic District
county and State Madison County, AL

which was buying up mills across the country and its name was changed to Huntsville Manufacturing Company. That year, the street names were changed from "A", "B", etc. to their present names (Alpine, Bradley, etc.) commemorating the service of long-time and/or distinguished employees.

At the time of Lowenstein's takeover, the mill operated with 109,696 spindles and 2,562 looms with 700 employees. Lowenstein's plans included increasing the number of spindles to 118,530 and adding 27,000 square feet of floor space. They also planned to increase the work force by over 50% to 1,100. The company added two parking lots in the late 1940s to accommodate these new workers. On September 26, 1947, the mill announced the addition of 104 looms. One year later, the company inaugurated a new capital investment program which involved a plant renovation and installation of new machinery costing half a million dollars. By 1949, the plant had added a four-hour Saturday to its former five-day work week.^{lxx}

Despite these improvements, Lowenstein could not circumvent the overall decline of the textile industry as a whole. In 1949, after the completion of repairs to the village houses, Lowenstein offered them for sale to its employees for 20 per cent under their appraised value. Prices ranged from \$1,725 for a three-room house to \$4,000 for a twelve-room dwelling. Most of the homes were duplexes situated on lots with 100 to 200 foot frontage and varied from 170 to 200 feet deep. Also at this time, the name of the village was changed from Merrimack to Huntsville Park.^{lxxi}

Although a six-week strike disrupted operations in the spring of 1951, work resumed in April.^{lxxii} That year, the Joseph Bradley School was donated by Lowenstein to the county and Brahan Springs was donated to the City.

In 1955, Lowenstein announced another improvement program to the mill which included air conditioning one of the weave rooms, overhauling its 837 E-model looms, building a new opening room in the warehouse and equipping it with new machinery, as well as other remodeling and improvements to the mill. By then, the mill was operating 145,896 spindles, 3,437 looms, and used 43,000 bales of cotton per year, producing some 95 million yards of cloth. In addition, the plant was operating three shifts, six days a week, and employed about 1,500 laborers.^{lxxiii}

In 1988, Lowenstein sold the mill to Springs Industries which operated it for only one year before finally closing it down completely in 1989. The mill was demolished in 1992.

Architecture

The Merrimack Mill Village retains a diverse collection of textile mill village architecture. Constructed circa 1900 to 1955, the buildings are representative of the common southern mill village building types as identified in Christopher ver Planck's study of textile mill architecture for the Historic American Engineering Record. Included are examples of Type A, B, M, and J mill houses. There is also an abundance of Type L duplexes that are otherwise found almost exclusively in New England. In addition, the village contains fifteen I-Houses, three American Foursquare houses, one 1920s commercial building (Inv. #259), a 1936 church (Inv. #255), a 1951 church (Inv. #253), and one Colonial Revival highly stylized house (Inv. # 250). There is also a common style not identified by ver Planck: a bungalow-style duplex with a shed roof.

10. Geographic Data

Verbal Boundary Description

The boundaries of the Merrimack Mill Village Historic District are indicated on an accompanying scaled map. The map was based on information obtained from U.S.G.S. topographic maps, county tax assessor, and U.S.G.S. satellite images.

Boundary Justification

The boundary includes the portions of the former Merrimack Mill Village area that retain sufficient integrity to convey a sense of the historic time and place of the district.
